

SQL Practice Questions

Easy to Moderate Level • TechMinds Computer Institute

Topics Covered

Primary Key, Foreign Key, Constraints, Create Database, Create Table, INSERT, UPDATE, DELETE, ALTER TABLE, DROP, TRUNCATE, SELECT, WHERE, Operators, LIMIT and ORDER BY.

Practice Questions

1. Create a database named **company_db**.
2. Create an **employees** table with columns: employee_id, employee_name, age, city and salary. Make employee_id the Primary Key.
3. Insert 5 employee records into the employees table.
4. Display all records from the employees table.
5. Display only employee_name and salary.
6. Display employees whose salary is greater than 50,000.
7. Display employees who live in Indore.
8. Display employees whose age is greater than or equal to 25.
9. Display all employees ordered by salary from highest to lowest.
10. Display the top 3 employees with the highest salary using ORDER BY and LIMIT.
11. Display employees whose salary is between 50,000 and 80,000.
12. Display employees whose department is either IT or HR using IN.
13. Display employees whose name starts with the letter R using LIKE.
14. Display employees who do not live in Indore.
15. Display employees whose salary is greater than 50,000 AND whose department is IT.
16. Display employees who live in Indore OR have a salary greater than 80,000.
17. Add a new column named **email** using ALTER TABLE. Then update email addresses for at least 3 employees.
18. Assume salary was created as VARCHAR. Change its datatype to INTEGER using ALTER TABLE.
19. Delete the employee whose employee_id is 4. Then verify that the record has been deleted.
20. Create a departments table with department_id as Primary Key. Add department_id as a Foreign Key in employees, then insert suitable department and employee records.

Bonus Practice

Bonus A. Remove the email column from employees using ALTER TABLE ... DROP COLUMN.

Bonus B. Remove all records from employees while keeping the table structure using TRUNCATE.

Bonus C. Completely remove the employees table using DROP TABLE.

Student Tip: First try each question yourself. Use SELECT * to verify the result after INSERT, UPDATE and DELETE operations.
